DETAILED ACTION / REASONS FOR ALLOWANCE

This action is in response to applicant's 12/20/2004 amendment.

Allowable Subject Matter

Claims 23-44 are allowed.

A double patenting rejection that had been made in the instant case is withdrawn in view of applicant's filing of a Terminal Disclaimer.

In addition, the applicant has amended each independent claim to overcome each of the prior art references that are considered relevant, namely Watanabe et al., Itoh, et al. and Keys et al. (all of record, either in applicant's IDS or cited in an earlier action). Each of these teach scanners with adjustable delay times for delays between reporting of reads. As the examiner noted in the interview summary,

The applicant pointed out to the examiner that Watanabe et al., Itoh, et al. and Keys et al. do not teach a reader wherein the data reader actively selects a delay time. In Watanabe et al., Itoh, et al. and Keys et al., the examiner observed, it is user input only, which changes the delay time. The applicant suggested that the claims can be amended to further capture this distinction.

The applicant has amended each independent claim to reflect that the data reader actively selects a delay time based on a criteria that is acquired during operation while performing scanning.

Art Unit: 2876

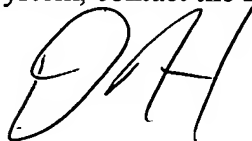

This is in clear distinction from system which have a delay time similar to that claimed, but wherein the delay time is adjusted manually or during a non-operational mode.
